

LOW.FARE

Version: March 2005 EUR

## LOW.FARE by Partners Software

The LOW.FARE system offers you a range of advanced features:

- Online, real-time availability (no caching!) and prices for 40+ low cost carriers and traditional carriers in a single web page
- No need to remember “who flies where”
- No need to use individual carrier web sites for availability or booking
- No software to install, simply use our web interface
- Frequent system upgrades and enhancements
- Different versions to match your individual requirements

**LOW.FAREcounter** – The entry-level version, designed to support your sales staff at the travel agency counter or in a call center. Simple and very price-worthy.

**LOW.FAREonline** – This version allows you to define service charges for travellers and can be integrated into your b2b or b2c web sites.

**LOW.FAREcorporate** – Integration of corporate rates on low cost carriers, the entry-level version for corporate travel offices.

**LOW.FAREbusiness** - More features for business travel, including creation of passive GDS PNRs that can be imported into mid/back-office systems. This version also allows for an automatic low cost carrier check upon a standard GDS keyboard entry, eliminating the need to check low cost carriers in a separate web page.

**LOW.FARExml** – Provides a powerful XML access to the LOW.FARE system. You can design the user interface completely independently and can integrate low cost carriers in dynamic packaging systems or other booking system already present on your web site.
